VAWLT

Supercloud Storage.

Simple, Safe and Efficient Storage.

Vendor-independent Storage Solution.

Data **is encrypted, split** into segments and **stored in several Clouds** simultaneously for **solid and vendor-independent** long term data storage strategies.

Cybersecurity built-in.

Total **data privacy and availability** even in extreme cases. Data security in accordance with the strictest turnkey requirements and **without the need for advanced technical knowledge**.

Ransomware Protection.

Mitigates ransomware attacks through **immutability** or **continuous system snapshotting**.

Costs without surprises.

Simple contracting process with **known costs**, **no additional fees**, **no surprises**. Adapted to your needs from day one.

BENEFITS

Data protection built-in

Vawlt guarantees total data security and privacy. It also mitigates potential **ransomware attacks**.

Cost Reduction

Reduce the cost and complexity of data storage with a **simple and predictable cost model.**

Simple

Subscription, deployment, and configuration in minutes/hours without the need for advanced technical knowledge.

Flexible

Adapted to your needs: different **amounts of data, storage protocols, use-cases, data retention**, etc., all in the same solution.
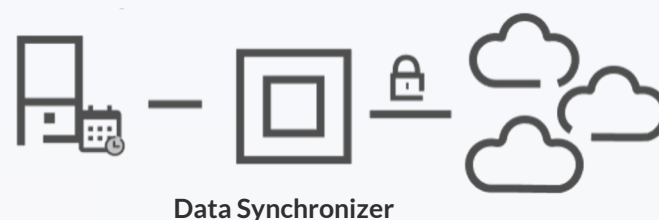

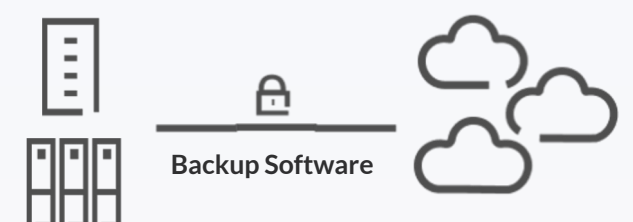

MAIN USE-CASES

Active Archive

Reduce costs by freeing up resources to the cloud without compromising data access or complicating architecture.

Immutable Copy

Data Synchronizer

Ensure **continuous ransomware protection** of your data **effortlessly.**

Offsite Backup Repository

Backup Software

Secure offsite data repository with seamless integration with your backup software.
